CASE STUDY 12 — ANALYTICS & BUSINESS INTELLIGENCE

Creating Reports & Dashboards for Data Visualization in Zoho Creator

PLATFORM	ANALYTICS ENGINE	REPORT TYPES	DATA AGGREGATION
Zoho Creator C6	Page Builder & Pivot Engine	Grid, Kanban, Pivot, Chart	Deluge Aggregates

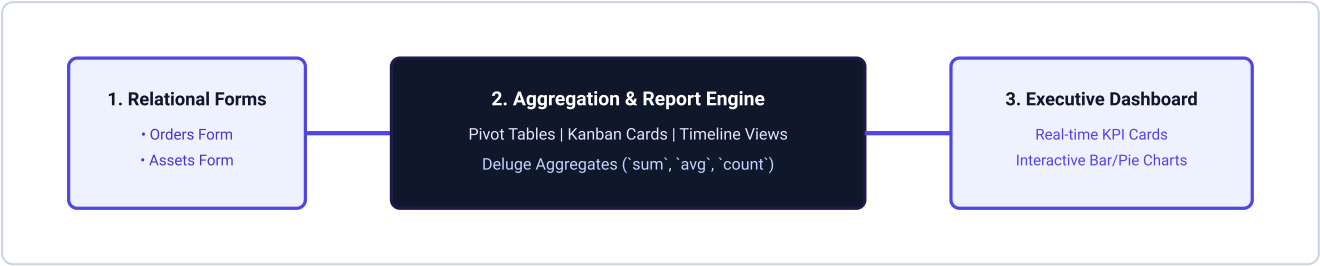

1. EXECUTIVE SUMMARY

Data visualization transforms raw database records into actionable business intelligence. Zoho Creator provides native reporting tools, pivot table creators, dynamic chart widgets, and real-time dashboard builders. This case study explores configuring multi-dimensional reports, building executive KPI dashboards, and embedding aggregated visual analytics into multi-device application interfaces.

10+	Real-Time	Granular
NATIVE VISUAL REPORT VIEWS	DYNAMIC KPI CARD SYNC	ROLE-BASED RECORD VISIBILITY

2. DASHBOARD & VISUAL ANALYTICS ARCHITECTURE

The dashboard architecture consolidates transactional data from multiple relational forms, passing aggregated results into visualization components arranged across standard dashboard layouts.

3. COMPARISON OF CREATOR REPORT TYPES

Selecting the appropriate report type ensures business metrics are interpreted quickly and clearly by stakeholders.

Report View	Best Suited Data Model	Key Capability / Interaction	Business Use Case
Grid Report	Tabular multi-column datasets	Inline editing, sorting, batch export	Master customer & inventory list
Kanban View	Categorized status-driven records	Drag-and-drop status update transition	Support tickets & project pipeline
Pivot Chart	Multi-dimensional relational records	Cross-tabulation, drill-downs, grouping	Quarterly sales performance comparison
Timeline / Gantt	Date-range bound activities	Visual duration bars and milestone markers	Resource allocation & project schedule
Map View	Geographic address entries	Interactive pin mapping & route preview	Field service dispatch tracking

4. AGGREGATED METRIC CALCULATION VIA DELUGE

> **Dashboard KPI Rule:** Calculate real-time total revenue for closed deals in the current fiscal month and display dynamically on the main KPI card widget.

Executed Deluge Metric Aggregation Script

```
// Calculate Monthly Revenue for Executive Dashboard KPI Card firstDayOfMonth = zoho.currentdate.toStartOfMonth(); lastDayOfMonth = zoho.currentdate.toEndOfMonth(); monthlyDeals = Sales_Order[Order_Date >= firstDayOfMonth && Order_Date <= lastDayOfMonth && Stage == "Closed Won"]; totalRevenue = monthlyDeals.sum(Total_Amount); // Return formatted metric for Display Widget return "$" + totalRevenue.toString("###,##0.00");
```

5. STRATEGIC SUMMARY & ANALYTICS GOVERNANCE

Visual reports and live dashboards in Zoho Creator transform static database tables into active decision-support systems. By establishing automated KPI aggregation, intuitive report layouts (Kanban, Grid, Pivot), and role-based data permissions, organizations gain full visibility over operational health while enforcing strict data governance.
