CASE STUDY 11 — APPLICATION UI & UX ENGINEERING

Designing Pages and Navigation for Multi-Page Apps in Zoho Creator

PLATFORM	UI DESIGNER	NAV MODEL	TARGET APP
Zoho Creator C6	Page Builder / HTML Snippet	Hierarchical / Role-Based	Enterprise ERP Portal

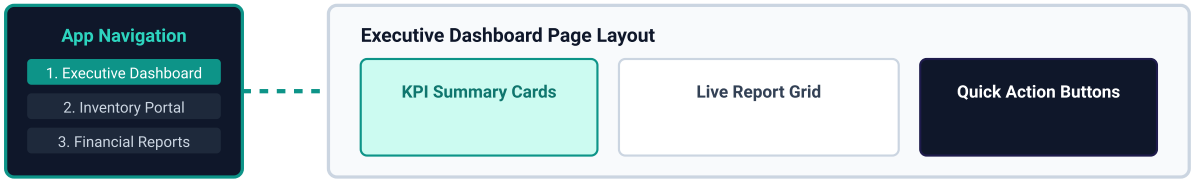

1. EXECUTIVE SUMMARY

In complex multi-page enterprise software, visual clarity and intuitive navigation dictate platform adoption and operational efficiency. Zoho Creator Page Builder empowers developers to design customized user interfaces, executive dashboards, interactive widgets, and multi-tier navigation trees. This case study details the structural design and navigation strategy for a multi-module enterprise business application.

3-Tier	Drag-n-Drop	Role-Based
NAVIGATION TREE HIERARCHY	VISUAL PAGE BUILDER BUILDER	DYNAMIC UI PERMISSIONS

2. MULTI-PAGE APPLICATION LAYOUT & NAVIGATION TREE

The UI layout is structured around a master navigation sidebar routing users to modular sub-pages containing KPI widgets, embedded reports, quick-action panels, and HTML/ZML custom elements.

3. UI COMPONENT MAPPING & PAGE ELEMENTS

Pages in Zoho Creator combine low-code drag-and-drop components with custom ZML (Zoho Markup Language) and HTML snippets for granular visual control.

Page Component	Visual Element Type	Data Binding Source	User Interaction / Action
Metric KPI Cards	Stat Display Panel	Aggregate Aggregate Query (`count`, `sum`)	Drill-down filter on click
Embedded View	Grid / Kanban Widget	Form Submissions Report Table	Inline record edit and status move
Action Bar	Custom HTML Buttons	Deluge Trigger (`openUrl`, `submit`)	Launches modal form overlay
Analytics Chart	Bar / Donut Chart	Grouped Relational Data Query	Hover tooltips & category drill-down
Nav Header	Breadcrumb / Search	System Global Navigation State	Instant keyword record lookup

4. DYNAMIC NAVIGATION & CUSTOM ACTION SCRIPTING

> **Navigation Rule:** Redirect users to dedicated sub-pages based on user roles (Admin vs. Standard Operator) upon opening the main application portal.

Executed Page Redirection Script (ZML / Deluge Page Event)

```
      // Page Load Redirection Based on Access Role if (zoho.loginuser.getRole() == "Inventory_Manager") { openUrl("#Page:Inventory_Overview", "same window"); } else if (zoho.loginuser.getRole() == "Executive") { openUrl("#Page:Executive_KPI_Dashboard", "same window"); } else { openUrl("#Page:General_Helpdesk", "same window"); }
```

5. STRATEGIC TAKEAWAYS & UI BEST PRACTICES

Effective page and navigation design in Zoho Creator transforms disparate forms and data tables into a cohesive business platform. By establishing standardized visual hierarchy, role-tailored navigation sidebars, and fast action panels, organizations drastically reduce employee training time and enhance data input precision across mobile and desktop interfaces.
